Complete fabricated all aluminum chassis

Mounting points

Engine bay accepts any engine configuration.
Cooling hose, cable, brake line and wiring locations pre-fabricated in chassis.
Utility tunnel

Reinforced mounting points
A-arms

Mounting hardware

Corvette C5 spindle on mounting plate

Spindle mounting plate
Charley Strickland has a long history in NHRA and NASCAR designing, building and racing cars. His connections with numerous suppliers has allowed him to design a chassis that can be completed with direct purchase parts.

The chassis was designed for the Chupacabra, but with minor modifications, the chassis can be produced to accommodate numerous models.

This chassis design has been over 3 years in the making. The full story of the design process can be found on Charley’s YouTube Channel.

A purchased chassis will come with a list of suppliers and parts that can be purchased to complete your project.
